## Emergency Instructions

### STRATEGY STATEMENT

Even Whitey is excited about this team, pacing back and forth in his cell. Barry usually lets the starting nine play into the 6th — consult this page and the chart on the next page for specific instructions about when and whom to substitute — but when you go to your pen, that’s often (but not always) the time to go to the bench. We have depth this year, but DON’T WASTE games or plate appearances. We PLAY TO WIN every game. The offense should hit (and walk) and pound the ball. The bullpen is deep; USE IT.

### BATTING ORDERS

These lineups are for true emergencies only. I SEND OUT LINEUPS WITH INSTRUCTIONS FOR EVERY ROAD SERIES. If you don’t receive them (or a message from me) by the 4th of the month, please contact me. I’m expecting a busy work year.

### OFFENSIVE STRATEGY

#### HIT AND RUN

In general, look to H&R early and STEAL late in a close game.

- **Lough, Prado, Robertson, and Walker** look to H&R whenever legal with a baserunner below on 1B.
- **Crawford, Cuddyer and Seager** H&R only when baserunner on 1B has 25+ adjusted chances.

**BASERUNNERS:** Crawford, Lough, Polanco, Robertson, Seager, Semien, Stubbs, Walker, and Weeks.

**Board Game:** With 1B-and-3B, H&R only with 0 or 2 out.

**Computer Game:** Never H&R with 2 outs.

#### STEALING

- In the 4th or later, tied or down 1 run, **Lough, Polanco, Robertson, and Stubbs** can steal 2B with 25+ chances.
- In the 8th or later, same situation, add **Adams, Crawford, Cuddyer, Encarnacion, Holliday, Prado, and Semien.**
- Don’t steal 3B or home.

**Limit** everyone but **Polanco** and **Stubbs** to 1 straight attempt per series. **Polanco** and **Stubbs** can have 2 per series if needed.

**Continue** to H&R even if the baserunner has used his attempt.

#### PINCH-HITTING

Not everyone on the bench is available. Check the Usage Chart. PH in the 6th or later, tied or down 1. Consider in order:

- vs. RHP: **Adams, Avila, Lough, Polanco, or Semien.**
- vs. LHP: **Prado, Robertson, Gattis, or Semien.**

**ALWAYS MAINTAIN THE BEST DEFENSE IF WE LEAD.**

#### PINCH-RUNNING

In the 6th or later, PR for a SLOW runner if we’re tied or down 1–2 runs with **Lough, Polanco, Robertson, or Semien.**

**Note:** Cingrani has 13 speed to PR for a SLOW RISP.

#### SACRIFICE

RARE; primarily with **Avila** or **Crawford** and some of the lighter bats. Only with runner(s) on 1B, 2B, or 1B-and-2B; no out, tied or down 1 run, 6th inning or later. Do not squeeze.

#### RUNNER ADVANCEMENT

**Board Game:** Use the Adams Tables.

**Computer Game:** Play our team like your own team.

### DEFENSIVE STRATEGY

#### OUTFIELD THROWS

Throw for the lead runner unless the chances are 33+. Always throw for the tying/go-ahead runner in the 6th or later.

**Computer Game:** Follow this principle.

#### HOLD RUNNER ON FIRST

Always hold if the score is +/-4 runs, UNLESS the runner is absolutely no threat to steal. BUT NEVER HOLD vs. a PR hitter.

#### PLAY INFIELD IN

PLAY IN from the 7th inning, 0–1 out, tying/go-ahead run on 3B.

#### INTENTIONAL WALK

Barry’s seen it work. Use it sparingly, when it makes sense.

#### PITCH FROM THE STRETCH

In the 6th or later, score tied or we’re up 1, with a threat on 3B.

### PITCHING STRATEGY

#### MANAGING THE STARTERS

With **574** relief innings this year, we can rescue our bad starters if they get into early trouble. Here's what to watch for:

**We have three rules this year:**

1. DO NOT REMOVE A STARTER THROWING A SHUTOUT.
2. NO STARTER SHOULD PASS 11.7 INNINGS IN ANY GAME.
3. NO STARTER STAYS IN WHEN FATIGUED OR REDUCED.

**Chavez (4)**, **Norris (2)**, and **Smyly (3)** are all similar: decent grades, minimal peripherals, and short fatigues. They pitch into the 6th inning, then look for bullpen help if they give up a baserunner and the game is within 2 runs. If the score is more lopsided one way or the other, they can stay in until fatigued.

**Cingrani (7)** has ugly peripherals, but also a caddy in **Group E**. He's on the "3 or 3" rule: If he has given up 3 runs or pitched 3 innings, pull him when he gives up the next baserunner.

**Matsuzaka (8)** has the worst control in the rotation and a short fatigue to boot. Let him go until fatigued, and go to the bullpen.

**Skaggs (5)** pitches at least into the 5th inning. He has positive peripherals and solid fatigue. Give him the chance to escape early trouble. If the offense is keeping the game close, rescue him in the 5th or later. Winning the game always comes first.

**Teheran (1)** is the ace of the staff despite his less-than-stellar grade. But Barry trusts him. He pitches until fatigued, reduced, or into the 7th inning. If he makes it into the 7th and the game's within 3 runs, go to the pen with the first baserunner.

**Worley (6)** has the best control in the rotation. He pitches into the 6th inning and tries for the 7th. If the game's within 3 runs in the 6th or later, go to the pen with the first baserunner.

#### USING THE BULLPEN

This year's pen has more than **574.0** solid relief innings (almost **3.7 innings per game**). This year, we've divided up our relievers into five "groups." Refer to the chart below, but here's what you need to know about each **RELIEVER GROUP**:

**Group A:** Here's our new closer, **Wade Davis**. He has **72.0** innings to slam the door. He can come in with a 1-3-run lead in the 8th to squash a rally for a five-out save, but he usually only works the 9th inning. **Normal Limit: 1.3 innings per game.**

**Group B:** With **159.0** innings between them, these set-up guys come in when we lead, it's tied, or we're down by 1 run in the 7-9th innings. **Leone** sticks to these conditions, but you can play a little loose with the LH relievers (**Bastardo** or **Outman**). Since only one is active at any time, use the lefty when it counts most in the game. **Limit: 1.7 innings per game.**

**Group C:** Here's the part of the bullpen with good control. Both **De Fratus** and **Hunter** have **113.3** innings to stop walks and hits, and they're both active all the time. If you load the bases and need to bring in a reliever, it should be one of these guys. Despite what the Reliever Chart says, use them ANYTIME with the score within 3 runs. **Limit: 1.3 innings per game.**

**Group D:** This group features good grades, but bad control, so we want them to pitch early and middle relief. They have **140.7** innings to keep the game close if we lead or trail by a few runs, mostly in the 5-7th innings. **Limit: 2.3 innings per game.**

**Group E:** At the bottom of the bullpen are the grade 10\*s. They have **89.3** innings, not including **Peacock's** emergency innings. Their job is to get us to the better innings (or save them), usually in the 4-7th innings. They are the long men, to be used in blowouts, EVEN PAST FATIGUE. **Limit: 2.7 innings per game.**

## Emergency Instructions

USE THE CHART BELOW AS A **QUICK REFERENCE GUIDE** TO DETERMINE WHICH **RELIEVER GROUP** TO BRING IN WHEN. The section above explains the limits and usage notes for each group. Some groups may only have one pitcher active during any given month. If we need a reliever for **innings 1-4**, it means the starter's been pounded out, so go to the mop end of the bullpen (**Group E**) to soak up innings. This bullpen is well matched to the rotation, but don't overuse any one reliever.
